MINDBALL BALEXERT GENEVE 2009

THE FIRST DUEL ASSOCIATING COMPETITION AND RELAXATION. WILL YOU BE ENOUGH ZEN TO BEAT YOUR OPPONENT

Two players are in confrontation face to face. Every player puts a headband outfitted of sensors placed on the forehead. The most quiet, calmed and concentrated player will advance the ball towards his opponent without touching it. The party is won when the ball arrives in opposite field.

Mindball was originally conceived in Sweden by «interactive institute», a creations laboratory of innovations associating art, design and technologies, and investigating new forms of interaction and communication between persons.

The interest of the game is that it offers a new way of conceiving a duel, or the performance is not any more dictated by the calculation, or the decision-making, but by the capacity to focus its own concentration, and to get loose from the stake in the fight.
